

DARTON RANGER I

A Technical Bulletin

The RANGER I was specifically designed to fit that special youngster and give them the right start in archery. A peak weight of 30 lbs. is

adjustable all the way down to 12 lbs. so that even the smallest person can comfortably shoot the Ranger I. The power stroke is enhanced with 30% let-off to make the shooting experience even more enjoyable and easier to master. The bow has low

let-off to make it safer at its light draw weights.

The peak weight can be adjusted with the use of the limb bolts (fig #3). Whenever a limb bolt is backed out (CCW) be sure to inspect the number of threads remaining. A minimum of one (1) exposed thread is required for safe use (fig #3). Be sure to adjust each limb in or out the same amount to keep the limb balanced. If you are not certain of the correct limb balance tighten both limbs down (CW) and then start over by turning them out (CCW) evenly until the desired peak weight is obtained.

Darton's Innovative technology eliminates the need for specific draw length adjustments by offering a smooth useable draw length valley of 17 - 25".

An adjustable positive draw stop (fig #1) is featured to insure the safe

use of short arrows. The draw stop also provides a definite stop for those archers that may want to adjust the bow for their individual use.

Ranger I;

Draw Weight Range:

15 - 30# peak

Draw Length Range:

17" - 25"

Refer to the Service Manual for other pertinent information that is important for safe and correct use of your bow.
